IMPLEMENT CODE TO RECOGNIZE TOKENS IN C

AIM:

To implement the program to identify C keywords, identifiers, operators, end statements like [], { } using C tool.

ALGORITHM:

- We identify the basic tokens in c such as keywords, numbers, variables, etc.
- Declare the required header files.
- Get the input from the user as a string and it is passed to a function for processing.
- The functions are written separately for each token and the result is returned in the form of bool either true or false to the main computation function.
- Functions are issymbol() for checking basic symbols such as () etc , isoperator() to check for operators like +, -, *, / , isidentifier() to check for variables like a,b, iskeyword() to check the 32 keywords like while etc., isInteger() to check for numbers in combinations of 0-9, isnumber() to check for digits and substring().
- Declare a function detecttokens() that is used for string manipulation and iteration then the result is returned from the functions to the main. If it's an invalid identifier error must be printed.
- Declare main function get the input from the user and pass to detecttokens() function.

PROGRAM:

```
#include<stdio.h>
int main(){
int count=0,k=0,i=0;
char a[25];
printf("Enter expression : ");
fgets(a,25,stdin);
while(a[i]!='\0'){
if(isalpha(a[i])){
printf("%c - identifier\n",a[i]);
}
else if(a[i]=='+' || a[i]=='-'||a[i]=='*'||a[i]=='/'){
printf("%c - arithmetic operator\n",a[i]);
}
else if(a[i]=='='){
printf("%c - assignment operator\n",a[i]);
}
else if(isdigit(a[i])){
char b[k];
while(isdigit(a[i])){
b[k++]=a[i];
i++;
}
printf("%s - digit\n",b);
k=0;
}
```

```
        i=i-1;
    }
    i++;
}
}
```

OUTPUT:

```
thirueswaran@thirueswaran-Inspiron-3443:~$ touch exl.c
thirueswaran@thirueswaran-Inspiron-3443:~$ cc exl.c
```

```
thirueswaran@thirueswaran-Inspiron-3443:~$ cc exl.c
thirueswaran@thirueswaran-Inspiron-3443:~$ ./a.out
Enter expression : x=y+z
x - identifier
= - assignment operator
y - identifier
+ - arithmetic operator
z - identifier
```

RESULT:

Thus to implement code to recognize tokens in c has been executed successfully.
